The requirement for restriction dated July 08, 2009 is hereby vacated. Below find a new requirement for restriction.

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 17-30, and 36 drawn to a stacking column.

Group II, claim(s) 31- 35, drawn to a method for manufacturing a ratchet lever.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the invention of Group I is a plurality of ratchet levers that are located above one another or next to one another and co-operate with one another, with the supporting element resting on the rotational axis as a separate part. The special technical feature of the invention of Group II is providing a sheet metal blank with tongues to the respective sides of middle section between the support arm and a control arm, and providing the tongues with a respective recess that extends partially into the middle section, wherein each tongue is bent in the area of the recess.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I: Figs. 1-6

Species II: Figs. 7-8

Species III: Figs. 9-10

Species IV: Fig. 11

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species I: Claims 19-20, 23-25, 28, and 36

Species II: Claims 21-22

Species III: Claims 26 and 27

Species IV: Claims 29 and 30

The following claim(s) are generic: 17 and 18.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species I contains a supporting element integrally connected with the ratchet lever. Species II contains a supporting element which is not integrally connected with the ratchet lever. Species III contains a latching device and slider suitable for latching the ratchet levers in the working position. Species IV contains springs allocated to the respective ratchet levers.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
